PROFESSIONAL SUMMARY

M.S. in Data Analytics graduate with hands-on project experience using SQL, Python, and Tableau for data cleaning, database design, analysis, and dashboard reporting. Portfolio includes a normalized PostgreSQL database, an interactive customer churn dashboard, and a loan default risk model. Spent 10 years in operations, including 8+ years in operations management, giving me a practical understanding of how businesses rely on accurate, timely information.

ANALYTICS PROJECTS

Customer Churn Analytics Dashboard | *Tableau, EDA*

- Designed an interactive telecom churn dashboard surfacing retention-risk patterns across contract type, income, geography, and payment method.
- Built filterable views that make churn patterns easy to explore for non-technical audiences.

Relational & Non-Relational Database Design | *PostgreSQL, MongoDB, SQL, ETL*

- Designed a normalized 3NF PostgreSQL database across 5 tables and 100,000 records, using staging-table ETL to load raw data before moving it into a clean relational structure.
- Wrote SQL with CTEs, indexes, and reporting views, and built a parallel MongoDB implementation with aggregation pipelines to compare relational and document-oriented designs.

Loan Default Risk Analysis | *Python, Scikit-learn, Random Forest*

- Cleaned and prepared 148,670 loan records through data wrangling and feature engineering, then built a classifier using balanced class weighting and stratified k-fold cross-validation.
- Achieved 73.7% ROC-AUC; evaluated precision-recall tradeoffs and framed the results as a business risk decision tool for non-technical stakeholders.

Statistical Analysis & Market Basket Analysis | *Python, SciPy, Statsmodels, Apriori*

- Ran hypothesis tests on health insurance data (Pearson correlation, ANOVA, Mann-Whitney U, Chi-Square) to identify factors significantly associated with insurance charges.
- Applied the Apriori algorithm to 8,234 retail transactions, surfacing high-lift product association rules (lift of 88.2) to inform cross-promotion strategy.

TECHNICAL SKILLS

Core Tools: SQL, Python, Tableau, Excel, PostgreSQL, MongoDB, Git/GitHub

Data Preparation: data cleaning, data wrangling, ETL, data modeling (3NF normalization), exploratory data analysis

Analysis & Reporting: statistical analysis, hypothesis testing, KPI reporting, dashboarding, data visualization

Methods & Libraries: Pandas, NumPy, Matplotlib, SciPy, Statsmodels, Scikit-learn, regression, classification, clustering

PROFESSIONAL EXPERIENCE

Xtreme Car Wash — Anniston, AL
General Manager — *Jan 2022 - Feb 2026*

- Led day-to-day operations across 3 express car wash locations, managing 20+ employees.
- Coached site managers and standardized procedures across locations to keep service consistent.
- Managed supply ordering, inventory, and equipment maintenance across 3 locations.

Site Manager — *Mar 2020 - Jan 2022*

- Monitored daily wash volume and throughput to keep site operations on target.

International Car Wash Group — Gadsden, AL
Site Manager — *Oct 2017 - Mar 2020*

- Managed daily operations and staff performance at a high-volume site.

Zippy's Car Wash of Gadsden — Gadsden, AL
Customer Service Attendant — *Oct 2015 - Oct 2017*

EDUCATION & CERTIFICATIONS

Master of Science (M.S.) in Data Analytics - Data Science, Western Governors University — *Mar 2026*

Bachelor of Science (B.S.) in Management, Jacksonville State University, Summa Cum Laude, Special Honors — *May 2024*

A.S. in General Studies - Business Administration, Gadsden State Community College — *Aug 2022*

Certifications: CompTIA A+; WGU Data Science Professional; WGU Data Analytics Professional; WGU Data Operations
